## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-4, 6-11, 13-17 and 19-20 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

While Leonard et al. (U.S. Patent No. 3,826,904) discloses a blender a plurality of outlets, wherein each of said plurality of outlets provides a corresponding one of said plurality of components according to a corresponding flow rate for blending by said blender, a plurality of source controllers, wherein each of said plurality of source controllers controls the flow rate of a corresponding one of said plurality of outlets, and a blend controller determining the flow rate for each of said plurality of source controllers, Kwak (U.S. Patent No. 6,866,830) discloses that plurality of target properties can be attained by further blending a plurality of components including a first component from an intermediate blend point which would produce an aggregate volume of a product, and Navani et al. (U.S. Patent No. 7,448,046) discloses receiving data indicating whether a first component is available from start of blending, said data also indicating a time instance at which said first component is available.

None of these references taken either alone or in combination with the prior art of record disclose:

(Claim 1) “a method of blending including a determining step, wherein said determining comprises: computing using said digital processing system a plurality of ideal volumes corresponding to said plurality of components which would be blended if said first component were to be available during entire blend duration, wherein said plurality of ideal volumes includes a first ideal volume for said first component; assigning said first ideal volume to a temporary variable; searching whether one or more of said intermediate blend points are feasible with said temporary variable as volume for said first component; if one or more of said intermediate blend points are feasible, said controlling using one of said one or more intermediate blend points to control the flow rates of said plurality of components; and if any of said intermediate blend points is not feasible, decreasing said temporary variable by an amount and performing said searching”,

(Claim 8) “a computer readable medium storing instructions for determining, wherein said determining comprises: computing a plurality of ideal volumes corresponding to said plurality of components which would be blended if said first component were to be available during entire blend duration, wherein said plurality of ideal volumes includes a first ideal volume for said first component; setting a temporary variable equal to said first ideal volume; finding whether one or more of said intermediate blend points are possible with said temporary variable as volume for said first component; if one or more of said intermediate blend points are possible, using one of said one or more intermediate blend points to control the flow rates of said plurality of

components; and if one or more of said intermediate blend points are not possible, decreasing said temporary variable by an amount and performing said finding”, and

(Claim 14) “ a manufacturing plant, including a blend controller configured to determine the flow rate for each of a plurality of source controllers and configured to compute a plurality of ideal volumes corresponding to said plurality of components which would be blended if said first component were to be available during entire blend duration, wherein said plurality of ideal volumes includes a first ideal volume for said first component; assign said first ideal volume to a temporary variable; search whether one or more of said intermediate blend points are feasible with said temporary variable as volume for said first component; if one or more of said intermediate blend points are feasible, said control using one of said one or more intermediate blend points to control the flow rates of said plurality of components; and if any of said intermediate blend points is not feasible, decreasing said temporary variable by an amount and performing said search”,

in combination with the remaining elements and features of the claimed invention. It is for these reasons that the applicant’s invention defines over the prior art of record.

### ***Conclusion***
